

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

- 1-86. (canceled)
87. (previously presented) A method of treating a subject having an angiogenesis-dependent tumor, the method comprising:
- identifying a subject having an angiogenesis-dependent tumor; and
- administering to the subject a polypeptide comprising the amino acid sequence of SEQ ID NO:2 (TSP-2) or a fragment thereof capable of inhibiting endothelial cell migration, wherein the fragment comprises at least 10 contiguous amino acids of either (a) a procollagen domain of TSP-2, or (b) a type I repeat of TSP-2.
88. (previously presented) The method of claim 87, wherein the fragment comprises the sequence of SEQ ID NO:10 (WSPWAEW).
89. (previously presented) The method of claim 87, wherein the tumor is an epithelial tissue tumor.
90. (previously presented) The method of claim 87, wherein the tumor is a skin tumor.
91. (previously presented) The method of claim 90, wherein the tumor is a squamous cell carcinoma of the skin or a malignant melanoma.

92. (previously presented) The method of claim 87, wherein the tumor is a prostate tumor.

93. (previously presented) The method of claim 87, wherein the tumor is a benign skin tumor.

94. (previously presented) The method of claim 87, further comprising increasing TSP-1 activity.

95. (previously presented) The method of claim 87 or claim 94, further comprising inhibiting VEGF activity.

96. (previously presented) The method of claim 87, further comprising administering a chemotherapeutic agent.

97. (previously presented) The method of claim 96, wherein the chemotherapeutic agent is taxol or carboplatin.

98. (previously presented) The method of claim 87, wherein the fragment is up to 100 amino acids in length.

99. (previously presented) The method of claim 98, wherein the fragment is up to 50 amino acids in length.

100. (previously presented) The method of claim 87, wherein the fragment is at least 50 amino acids in length.

101. (previously presented) The method of claim 87, wherein the fragment is at least 100 amino acids in length.

102. (previously presented) The method of claim 87, wherein the fragment is at least 200 amino acids in length.

103. (previously presented) The method of claim 87, wherein the fragment comprises at least one type I repeat.

104. (previously presented) The method of claim 87, wherein the fragment includes between about 5 to 50 amino acids of a type I repeat.

105. (previously presented) The method of claim 87, wherein the fragment comprises at least one sequence selected from the group of: amino acids 382-429 of SEQ ID NO:2, amino acids 438-490 of SEQ ID NO:2, and amino acids 495-547 of SEQ ID NO:2.

106. (previously presented) The method of claim 87, wherein the fragment comprises SEQ ID NO:11.

107. (previously presented) The method of claim 87, wherein the fragment comprises a procollagen domain or a fragment thereof having the ability to inhibit endothelial cell migration.

108. (previously presented) The method of claim 87, wherein the fragment comprises SEQ ID NO:6.

109. (previously presented) The method of claim 87, wherein the fragment comprises SEQ ID NO:7.

110. (previously presented) The method of claim 87, wherein the fragment comprises SEQ ID NO:8.

111. (previously presented) The method of claim 87, wherein the fragment comprises SEQ ID NO:9.

112. (previously presented) The method of claim 87, wherein the fragment comprises a fragment of SEQ ID NO:10 at least 4 amino acids in length.

113. (previously presented) The method of claim 87, wherein the fragment comprises two type I repeats.

114. (previously presented) The method of claim 87, wherein the fragment comprises three type I repeats.

115. (previously presented) The method of claim 87, wherein the fragment comprises an amino acid sequence encoded by nucleotides 294-1367 of SEQ ID NO:1.

116. (previously presented) The method of claim 87, wherein the fragment comprises an amino acid sequence encoded by nucleotides 294-1883 of SEQ ID NO:1.

117. (previously presented) The method of claim 87, wherein the fragment comprises an amino acid sequence encoded by nucleotides 1383-1883 of SEQ ID NO:1.

118. (previously presented) The method of claim 87, wherein the tumor is a colon tumor.

119. (previously presented) The method of claim 87, wherein the tumor is a breast tumor.

120. (previously presented) The method of claim 87, wherein the tumor is a lung tumor.

121. (previously presented) The method of claim 87, wherein the tumor is Kaposi's sarcoma.

122. (previously presented) A method of treating an angiogenesis-dependent tumor, the method comprising administering to the subject a fragment of TSP-2 consisting of the sequence of SEQ ID NO: 10 (WSPWAEW).

123 (new) The method of claim 1, wherein the polypeptide is a fragment of at least 10 contiguous amino acids of a procollagen domain of TSP-2, wherein the fragment is capable of inhibiting endothelial cell migration.

124. (new) The method of claim 1, wherein the polypeptide is a fragment of at least 10 contiguous amino acids of a type I repeat of TSP-2, wherein the fragment is capable of inhibiting endothelial cell migration.

125. (new) The method of claim 1, wherein the polypeptide comprises TSP-2 (SEQ ID NO:2).
